Document

	RID ID **PDR** 163
	Review CSMS/SDPS
	Originator Ref
	Priority 1

Section	**Page**	**Figure Table**

Category Name   System-level   **Actionee**   HAIS

Sub Category   Operations Concept

Subject   Fault management

Description of Problem or Suggestion:

Possible lack of coordination between CSMS and SDPS fault management processes.

Originator's Recommendation

To the extent that separate fault management processes exist in CSMS and SDPS, ensure that faults are reported through to CSMS so that the LSM/SMC view captures all faults that must be handled for effective system management and monitoring.

GSFC Response by: **GSFC Response Date**

HAIS Response by: Forman   **HAIS Schedule**   2/10/95

HAIS R. E.   Whitehurst   **HAIS Response Date**   2/28/95

Concur with originator's recommendation, CSMS will continue to coordinate with SDPS on identifying and reporting of faults for effective system management and monitoring. Management events detected by SDPS (or FOS) are reported to the CSMS agent which logs the event and filters for real-time notification to the LSM.
